

AMENDMENTS TO THE SPECIFICATION

Change paragraph 0041, as follows:

[0041] Fourth, in the present attaching structure, the above-described engagement structure is employed. Therefore, when the device is removed in the tank assembling process due to low quality in inspection, the valve device 2 has to be removed at the maintenance operation, or components are selectively recovered in an operation of scrapping the tank. Thus, it is easy to separate the valve device 2 and the bracket 1.
